DETAILED ACTION

Allowable Subject Matter

1. **Claims 15-23 and 25-32** are allowed.
2. The following is an examiner's statement of reasons for allowance:

The closest prior art of record is Nonobe et al. (U.S. 5,929,594 A) and Hunt et al. (U.S. 2004/0083039 A1).

Nonobe et al. discloses a hybrid fuel cell system (10) comprising a fuel cell (20); an electric power storage device (30); a load portion (32; 34) which consumes electric power (C8/L18-37); and a control portion (50) programmed to measure an actual supply electric power value (I, Fig. 6) indicating an amount of electric power that is actually supplied from the electric storage device (30); and change an amount of electric power consumed by the load portion to increase or decrease consumption (S120, Fig. 6); wherein the control portion (50) is programmed to change the amount of electric power consumed by the load portion (32) to increase or decrease consumption to remove imbalance between charge and discharge of the electric power storage device (30) in the system (10).

Hunt et al. discloses a hybrid fuel cell system (Figs. 1 and 2) comprising a fuel cell (12; 41); an electric power storage device (32) a load portion (44) which consumes electric power (see current, [0022]); and a control portion (37) that is programmed to compute a supply electric power set value (I REQ, Fig. 2), which is an amount of electric power that needs to be supplied from the electric power storage device (32, [0039]); measure an actual supply electric power value (I HVEC, Fig. 2) indicating an amount of electric power that is actually supplied from the electric power storage device (32, [0047]); determine whether the supply electric power set value

(I REQ, Fig. 2) is greater than or less than the actual supply electric power value (I HVEC, [0047]); and change an amount of electric power (see voltage command, [0047]) after the control portion (37) determines the supply electric power set value (I REQ, Fig. 2) is greater than or less than the actual supply electric power value (I HVEC, Fig. 2); wherein the control portion is programmed to remove the imbalance between charge and discharge (see equilibrium, [0047]) of the electric power storage device (32) in the system by reducing a difference between the supply electric power set value (I REQ) and the actual supply electric power value (I HVEC).

Nonobe et al. nor Hunt et al. do not disclose, teach or suggest the following distinguishing feature(s):

A hybrid fuel cell system comprising a control portion programmed to change an amount of electric power consumed by the load portion after the control portion determines that the supply electric power set value is greater than or less than the actual supply electric power value.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
